

Doctoral Thesis On Photonic Devices for Quantum Information

A Pre-Doctoral FPI Fellowship for a Doctoral Thesis on “Photonic Devices for Quantum Information” is available in the frame of the Project NANINPHO-QD for a BsC/Engineers interested in a Doctoral Thesis on Photonic Devices for Quantum Information. The candidate will work on the Design, fabrication and Characterization of Two-Dimensional Photonic Crystals containing III-V nanostructures for single photon emitters and entangled photon emitters.
